DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1-6 and 53-68 are rejected under 35 U.S.C. 102(a)/103 as being clearly anticipated by Cnet, NASD giving Windows NT a chance in view Nasdaq, Rule Changes.

The primary reference teaches a method of detecting alert conditions including receiving a message in one of the plurality of networked computer systems for a new quote for a trading item; comparing the new quote to one or more existing quotes for the same item in one of the plurality of networked computer systems; and transmitting an alert message in one of the plurality of networked computer systems in response to comparing to another one of the plurality of networked computer systems if the new is an unusual activity. The reference fails to teach of the unusual activity being a locked or cross market condition. The secondary reference teaches that Locked or Crossed conditions are recognized equivalents of unusual activity. The examiner is unable to determine if the system of the primary reference includes locked or crossed conditions. It seems reasonable to conclude that the prior art reference inherently includes this alert algorithm, as the NASDAQ has regulatory power. In the alternative, it

would have been obvious for one skilled in the art at the time to have added this feature as motivated by the need to comply with the rule.
